

Analytics: Enhancement of the Search in the Report Overview

You can use the search function in the Analytics Report Overview to restrict the search to a specific column.

To do this, select the required column in the table overview from the new dropdown menu and enter the search term as usual. The search only lists results from the selected column.

The dropdown menu lists all available columns of the table overview, even if they are not visible according to your settings. The columns "Actions" and "Schedule" are excluded; they are not relevant to the search because they contain functions.
